Experiment Results Report

Credit line experiment - demo

SYNTHETIC DEMO | These data and results are illustrative.

01 / Analysis overview

Setting	Value
Input	Synthetic demo | Summary statistics
Control strategy	Credit line 1000
Partners	Princess, Holland, PriceLine, Carnival
Group by	FICO group
Metrics	Revolving Balance, RAR, NCL
Significance level	0.05
Multiple-test protection	Holm
Results calculated	2026-10-29T23:04:20+00:00
Analysis fingerprint	1219509132a6e1bd70a08153ce830f0a25d1c42f5c99b449f4f7455864dcfe6f

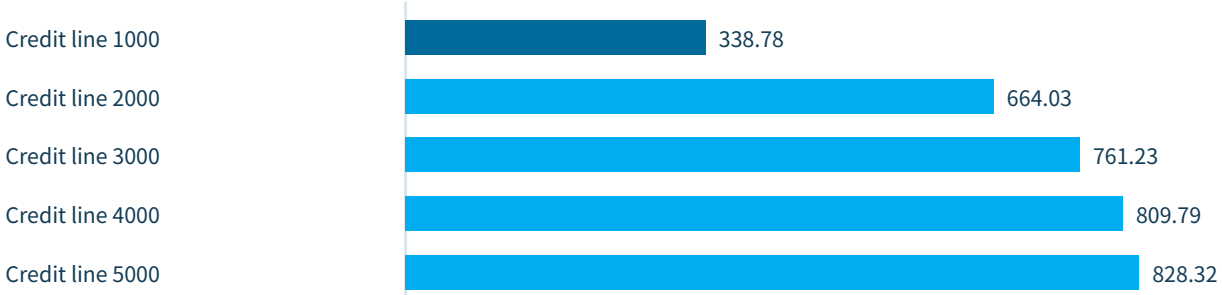
Review required: statistical significance alone does not establish commercial value or approval to launch.

02 / Overall results

Revolving Balance

Primary metric | Continuous | Preferred direction: Higher

Observed average by strategy (descriptive)



Overall difference confidence level: 98.75%.

C = Control; T = Test. Averages, changes and intervals are in metric units. p-values follow the selected overall protection.

Test strategy	N C / T	Average C / T	Change	Difference confidence interval	p-value	Result
Credit line 2000	16,371 15,771	338.78 664.03	325.25	314.84 to 335.66	<0.001	Significant
Credit line 3000	16,371 14,461	338.78 761.23	422.45	410.38 to 434.53	<0.001	Significant
Credit line 4000	16,371 13,750	338.78 809.79	471.01	458.00 to 484.02	<0.001	Significant
Credit line 5000	16,371 11,647	338.78 828.32	489.54	475.30 to 503.78	<0.001	Significant

RAR

Additional metric (exploratory) | Continuous | Preferred direction: Higher

Observed average by strategy (descriptive)

Overall difference confidence level: 98.75%.

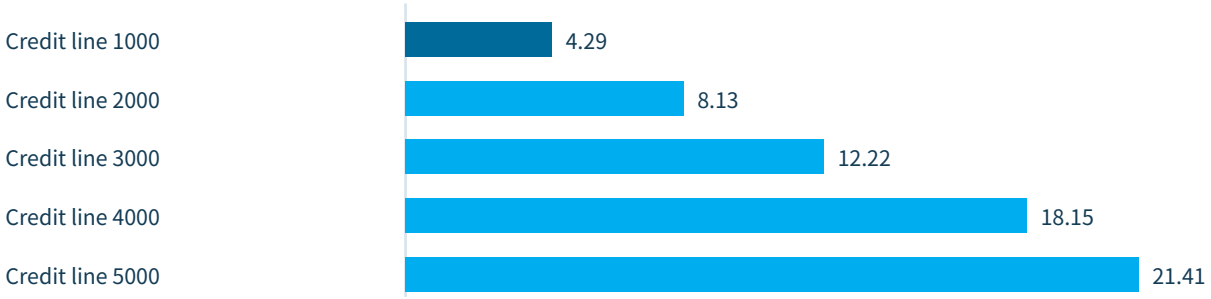
C = Control; T = Test. Averages, changes and intervals are in metric units. p-values follow the selected overall protection.

Test strategy	N C / T	Average C / T	Change	Difference confidence interval	p-value	Result
Credit line 2000	16,371 15,771	24.36 48.42	24.05	22.18 to 25.93	<0.001	Significant
Credit line 3000	16,371 14,461	24.36 52.38	28.02	25.47 to 30.56	<0.001	Significant
Credit line 4000	16,371 13,750	24.36 50.61	26.25	22.64 to 29.87	<0.001	Significant
Credit line 5000	16,371 11,647	24.36 48.96	24.60	20.04 to 29.17	<0.001	Significant

NCL

Additional metric (exploratory) | Continuous | Preferred direction: Lower

Observed average by strategy (descriptive)



Overall difference confidence level: 98.75%.

C = Control; T = Test. Averages, changes and intervals are in metric units. p-values follow the selected overall protection.

Test strategy	N C / T	Average C / T	Change	Difference confidence interval	p-value	Result
Credit line 2000	16,371 15,771	4.29 8.13	3.84	2.27 to 5.41	<0.001	Significant
Credit line 3000	16,371 14,461	4.29 12.22	7.94	5.65 to 10.22	<0.001	Significant
Credit line 4000	16,371 13,750	4.29 18.15	13.86	10.46 to 17.27	<0.001	Significant
Credit line 5000	16,371 11,647	4.29 21.41	17.13	12.77 to 21.48	<0.001	Significant

03 / Results by segment

Each segment is compared with its own Control. Segment results are exploratory and unadjusted; difference confidence level: 95%.

04 / Decision insights

Revolving Balance

4 of 4 Tests show a favorable, statistically significant change versus Control. Credit line 5000 has the largest observed change; the Tests have not been directly compared.

Credit line 2000 | Favorable | Change vs Control: +325.25 Revolving Balance • +96.0% vs Control • adjusted p <0.001

Credit line 3000 | Favorable | Change vs Control: +422.45 Revolving Balance • +124.7% vs Control • adjusted p <0.001

Credit line 4000 | Favorable | Change vs Control: +471.01 Revolving Balance • +139.0% vs Control • adjusted p <0.001

Credit line 5000 | Favorable | Change vs Control: +489.54 Revolving Balance • +144.5% vs Control • adjusted p <0.001

Additional growth tapers at higher limits: the latest step adds 18.53, compared with 325.25 for the first step. These Test-to-Test differences are descriptive.

RAR

4 of 4 Tests show a favorable, statistically significant change versus Control. Credit line 3000 has the largest observed change; the Tests have not been directly compared.

Credit line 2000 | Favorable | Change vs Control: +24.05 RAR • +98.7% vs Control • adjusted p <0.001

Credit line 3000 | Favorable | Change vs Control: +28.02 RAR • +115.0% vs Control • adjusted p <0.001

Credit line 4000 | Favorable | Change vs Control: +26.25 RAR • +107.8% vs Control • adjusted p <0.001

Credit line 5000 | Favorable | Change vs Control: +24.60 RAR • +101.0% vs Control • adjusted p <0.001

The highest credit line has no larger observed average than the preceding option; this comparison is descriptive.

NCL

No Test shows a statistically significant favorable change versus Control. An inconclusive result does not establish that the options are equivalent.

Credit line 2000 | Unfavorable | Change vs Control: +3.84 NCL • +89.6% vs Control • adjusted p <0.001

Credit line 3000 | Unfavorable | Change vs Control: +7.94 NCL • +185.1% vs Control • adjusted p <0.001

Credit line 4000 | Unfavorable | Change vs Control: +13.86 NCL • +323.3% vs Control • adjusted p <0.001

Credit line 5000 | Unfavorable | Change vs Control: +17.13 NCL • +399.4% vs Control • adjusted p <0.001

06 / Methods and formulas

Each comparison uses the selected metric and observed customers. The formulas below describe the calculations used in this report.

Combining non-overlapping summaries

Combined N = sum of each row N

Combined mean = sum of (row N x row mean) / combined N

Combined sample variance = sum of [(row N - 1) x row variance + row N x (row mean - combined mean)^2] / (combined N - 1)

Combining rows is valid only when they represent non-overlapping customers measured over a consistent outcome window. Sample variance is the unbiased variance with N - 1 in its denominator.

Continuous metrics: Welch two-sample t-test

Difference = Test mean - Control mean

Lift (%) = 100 x Difference / Control mean, when Control mean is positive

SE = sqrt(Test variance / Test N + Control variance / Control N)

t statistic = Difference / SE

Welch degrees of freedom = (vT + vC)^2 / [vT^2 / (Test N - 1) + vC^2 / (Control N - 1)], where vT = Test variance / Test N and vC = Control variance / Control N.

Difference confidence interval = Difference +/- t critical value x SE. The two-sided p-value comes from the t distribution using the Welch degrees of freedom.

Multiple comparisons and interpretation

If Holm protection is selected, overall p-values are adjusted across Tests within each metric. Overall intervals use a Bonferroni-adjusted confidence level: 100 x (1 - alpha / number of Tests)%. Consequently, p-values and intervals can lead to different conclusions. Without protection, the confidence level is 100 x (1 - alpha)%.

Segment comparisons are unadjusted and exploratory. Additional metrics are exploratory and are not adjusted across metrics. Confidence intervals describe the Test minus Control difference, not individual group averages.

Overall results reflect the observed population mix. Test-to-Test comparisons and differences between segments are not formally tested. Repeated early significance checks require a separately planned sequential method.

Randomization, SRM, sample completion, outcome maturity, baseline balance, missing outcomes, guardrails and costs have not been verified by this report. Review them before a decision.

Keep the source data and analysis settings for audit and reproducibility. The report contains aggregate results, not customer-level records.

Summary data cannot independently verify unique customers, overlapping rows, assignment integrity or missing outcomes.
